

Dear Hiring Team,

I'm excited to apply for the Software Developer – Analytics position at Arctic Wolf. With hands-on experience developing and deploying scalable systems using Python, SQL, Docker, and GitHub Actions, I'm passionate about building reliable data infrastructure that powers meaningful analytics and decision-making.

In a recent project, I built a modular task management backend using FastAPI and PostgreSQL, implementing secure authentication and automated CI/CD pipelines with GitHub Actions. I've also worked on RESTful data services and used tools like pandas and NumPy for data processing and feature extraction. While I haven't used Airflow or Redshift in production, I'm familiar with modern data pipelines, and I'm actively learning workflow orchestration tools and cloud data warehouse design.

What draws me to Arctic Wolf is your mission to end cyber risk through proactive and intelligent systems. I'm especially excited about contributing to FinOps analytics—an area where engineering and business intersect—and supporting cost visibility, forecasting, and optimization through data engineering best practices.

Thank you for considering my application. I'd love to bring my backend and data experience to Arctic Wolf's FinOps team and continue growing within a company that leads the future of security operations.

Sincerely,
Chen Chen
